Yehoram (Yoram) Gordon   02/07/1940 — 18/06/2022

Nicole Tomczak-Jaegermann   08/06/1945 — 17/06/2022

Yoram Gordon 1940–2022

Many results in Local Theory of Banach Spaces and Asymptotic Geometric Analysis.

Yoram Gordon 1940–2022

Many results in Local Theory of Banach Spaces and Asymptotic Geometric Analysis.

A fundamental work on local unconditional structures (joint with D.R. Lewis), answering one of Grothendieck questions on factorization of 1-summing operators through L_1, Gordon–Lewis property, *gl*-constant of a space.

Yoram Gordon 1940–2022

Many results in Local Theory of Banach Spaces and Asymptotic Geometric Analysis.

A fundamental work on local unconditional structures (joint with D.R. Lewis), answering one of Grothendieck questions on factorization of 1-summing operators through L_1, Gordon–Lewis property, gl-constant of a space.

Celebrated Gaussian min-max theorem, Gaussian approach to the Dvoretzky theorem, related results on Banach-Mazur distances, "low M^*-estimate", diameters of sections.

Yoram Gordon 1940–2022

Many results in Local Theory of Banach Spaces and Asymptotic Geometric Analysis.

A fundamental work on local unconditional structures (joint with D.R. Lewis), answering one of Grothendieck questions on factorization of 1-summing operators through L_1, Gordon–Lewis property, gl-constant of a space.

Celebrated Gaussian min-max theorem, Gaussian approach to the Dvoretzky theorem, related results on Banach-Mazur distances, "low M^*-estimate", diameters of sections.

Inverse Santaló inequality up to logarithm (joint with S. Reisner).

Many results in Local Theory of Banach Spaces and Asymptotic Geometric Analysis.

A fundamental work on local unconditional structures (joint with D.R. Lewis), answering one of Grothendieck questions on factorization of 1-summing operators through L_1, Gordon–Lewis property, gl-constant of a space.

Celebrated Gaussian min-max theorem, Gaussian approach to the Dvoretzky theorem, related results on Banach-Mazur distances, "low M^*-estimate", diameters of sections.

Inverse Santaló inequality up to logarithm (joint with S. Reisner).

Decomposition of Identity in the general case (joint with M. Meyer, A. Pajor, A.L.).

Many results in Local Theory of Banach Spaces and Asymptotic Geometric Analysis.

A fundamental work on local unconditional structures (joint with D.R. Lewis), answering one of Grothendieck questions on factorization of 1-summing operators through L_1, Gordon–Lewis property, *gl*-constant of a space.

Celebrated Gaussian min-max theorem, Gaussian approach to the Dvoretzky theorem, related results on Banach-Mazur distances, "low M^*-estimate", diameters of sections.

Inverse Santaló inequality up to logarithm (joint with S. Reisner).

Decomposition of Identity in the general case (joint with M. Meyer, A. Pajor, A.L.).

Series of works with C. Schütt, E. Werner, A.L. on Orlicz norms of sequences of random variables, order statistics and applications to convex geometry.

Nicole Tomczak-Jaegermann 1945–2022

Many deep results in both, the classical (infinite-dimensional) Banach space theory and in its finite-dimensional counterparts, Local Theory of Banach Spaces and Asymptotic Geometric Analysis.

Nicole Tomczak-Jaegermann 1945–2022

Many deep results in both, the classical (infinite-dimensional) Banach space theory and in its finite-dimensional counterparts, Local Theory of Banach Spaces and Asymptotic Geometric Analysis.

A result (with R.Komorowski) on existence subspaces without unconditional basis, (an important step in T.Gowers' solution of the homogeneous Banach space problem.)

Nicole Tomczak-Jaegermann 1945–2022

Many deep results in both, the classical (infinite-dimensional) Banach space theory and in its finite-dimensional counterparts, Local Theory of Banach Spaces and Asymptotic Geometric Analysis.

A result (with R.Komorowski) on existence subspaces without unconditional basis, (an important step in T.Gowers' solution of the homogeneous Banach space problem.)

Many works with P.Mankiewicz: a final solution of finite-dimensional counterpart of homogeneous problem (answering a question of V.Milman and improving previous results of M.Gromov and J.Bourgain);   randomized isomorphic Dvoretzky theorem; a result on average distances between projections of convex bodies (extending, in a sense, famous Gluskin's result on the diameter of Minkowski compactum); ... a survey *"Quotients of finite dimensional Banach spaces; random phenomena"* in Handbook of the geometry of Banach spaces (containing in particular, many applications of so-called Gluskin's polytopes).

Nassif Ghoussoub:
Nicole was intense, determined and fierce with one main focus: Mathematics.
She did not attempt to solve hard open mathematical problems.
She simply declared war on them.
